Numbers less than 5 are represented as '<5' to protect individuals' privacy. It is important to note that instances where doses of the Pfizer COVID-19 vaccine (Comirnaty) were administered to individuals aged 12 to 15 years old prior to Cabinet's approval for this age cohort were reportable events and should have been reported to the Centre of Adverse Reactions Monitoring (CARM). All events of this nature are self-reported to CARM and the Office of the Minister for COVID-19 Response does not hold further information on this.
