

PARTNERING TO GROW NEW ZEALAND'S MARITIME ENGINEERING SECTOR

We recognise the importance of staying current in an ever-developing engineering and technology landscape. This means supporting the personal passions and growth of our people to provide individual and organisational flexibility.

Growing our industry also means supporting students throughout their education and providing them with the opportunity to explore their passion for a career in engineering.

Babcock will support the AUT Engineering department in tailoring its world-class education to develop graduates that are well-versed and prepared for the challenges and trends within our industry. These projects will also enable Babcock and AUT to accelerate the development of technology, intellectual property, and commercialisation opportunities to find solutions to global problems using New Zealand capabilities and expertise.
