

Appendix 2: Auckland Region Response

Can I please get the number of relieving house officers and registrars between the above dates across each department?

1/ For 2019: March 27, June 5, August 14, October 23

2/ For 2022: March 30, June 8, August 17, October 26

3/ For 2023: March 29, June 7, August 16, October 25

Important Notes regarding data provided:

- The House Officer reliever data includes both House Officer and Senior House Officers.
- Data provided is for the three Auckland metro Districts;
 - Te Toka Tumai Auckland
 - Counties Manukau
 - Waitemata
- To provide context we have included the following as part of each response;
 - **Reliever Position FTE** this represents the approved number of full time equivalent (FTE) dedicated reliever positions for the service.
 - **Allocated FTE** this is the number of RMOs allocated to the Reliever position. Where this is more than the position FTE it means that the position is overallocated i.e. there are more RMOs allocated to the position.

Important note on Relief Models

The total number of dedicated reliever positions set out in the response is not indicative of all relief models in place across services at the District.

There are a number of different relief models utilised by services that do not involve dedicated reliever positions and where this applies they are not included in the reliever table. Examples of the various relief models are set out below noting that models 1 to 4 involve dedicated reliever positions.

Where the dedicated reliever position FTE has reduced over the timeframes requested this may be because;

- The service has changed their relief model and moved to one that does not include dedicated relief (models 5 to 8).
- Reliever position FTE may fluctuate where services operate summer / winter rosters and their overall position FTE increases in winter and then reduces in summer. Any changes in reliever FTE will be dependent on whether this affects the relief ratio's.

Relief Model 1: Designated Service Relief

- Relieving RMOs are employed into a designated service and only provide relief cover for that specific service roster. As an example, the designated General Surgery relievers only provide relief cover for duties within the General Surgery roster.

Relief Model 2: Pooled Relief

- Pooled relief is where relieving RMOs are in one large pool and relief cover is provided from within this pool for multiple services. Rosters for the relief RMOs can include duties from all services covered by the relief pool. For example, a Surgical House Officer relief pool would provide relief cover for all Surgical Specialities (e.g. General Surgery, Orthopaedics, Plastic Surgery, etc.).

Relief Model 3: Aligned Pooled Relief

- Aligned pooled relief is where relieving RMOs are in one large relief pool which provides cover for multiple services, however within this each RMO is aligned with 1-2 primary services.

Relief Model 4: Rotating Relief

- Rotating Relief is where throughout the run, RMOs rotate from a team position into a period of relief and a relieving RMO rotates into a designated team position. The purpose of this model is to ensure adequate relief cover while reducing the period individual RMOs are in a relief role.

Relief Model 5: Embedded Relief

- Embedded relief is where RMOs work a complete roster (no additional support required to staff the baseline roster) and cover RDOs, sleep days and day duties of RMOs on nights within the team without the need for a reliever.

Relief Model 6: After-Hours (Rostered Additional) Relief

- The After-Hours Relief model is where RMOs are assigned to a team position Monday – Friday as per their allocation and their relief duties only consist of hours over the ordinary hours such as evenings, weekends and nights. This is suited to services where the number of RMOs required during the day time is more than the after-hours requirement.

Relief Model 7: Embedded Relief/Re-allocation

- This model includes development of a roster template that allows for a set number of RMOs to be away at any given time, with afterhours shared across those remaining within the service. This is done either by writing the roster to accommodate and minimise the impact of pre-approved leave or by RMOs swapping shifts to accommodate leave booked after roster publication. In this model, the roster is written (and remunerated) based on the number of Registrars required at work on any given day instead of the number of RMOs allocated to the service.

Relief Model 8: Service Changes

- In certain positions, senior registrars may provide services in the hospital that cannot be adequately covered by a reliever/junior registrar during their absence. In addition, relief roles cannot be implemented at a Senior Registrar level due to college restrictions.
