

# CAS Open Data Schedule of Changes

CHANGE	REASON	DATE INCLUDED/SCHEDULED	COMMENT
Indicator of whether road is a State Highway or Local Road	Common request received by Stats Analysis team. Non-personal information	Scheduled for January 2017 [end December 2016 update]	This is already in the data (Crash_SH variable)
Vehicle type	Common request. Non-personal information.	Scheduled for January 2017 [end December 2016 update]	This has been prepared and was with CF to decide whether or not releasing crash vehicle information made persons identifiable by the crash record.
Non-injury crashes	Common request. Would be the same variables as current open data, so non-personal information.	2016 data should be available end June 2017. This will need to be a separate file to maintain timeliness of DSI data.	Prepared.
Separate 'true blank' values from 'unknown' - applies to fields such as: - intersection - junction type - road characteristic	Currently 'not applicable' is being included in 'unknown' (eg crashes not at an intersection have an intersection type of 'unknown').	Scheduled for January 2017 [end December 2016 update]	Updated meta-data to reflect that the database look-up tables code blanks as invalid/unknown.
Historic data for existing fields	Would meet requests for historical information. Would be the same variables as current open data, so non-personal information.	Scheduled for January 2017 [end December 2016 update]	Further information required to as what is actually wanted here.

Released under the Official Information Act 1982

## CAS Open Data – Requests for ‘Grey Area’ Variables

REQUESTED CHANGE	REASON GREY AREA	DECISION
Date (exact or month)	Date allows people to link to other information about the crash that may enable re-identification (eg. media reports).	
Cause	May be considered personal information	

Released under the Official Information Act 1982
