fyi-request-9250-a7e7dad8@requests.fyi.org.nz

Dear Hugh,

Thank you for your request made under the Local Government Official Information and Meetings Act 1987 (the Act), received on 13 December 2018. You requested the following information:

- *Information regarding the traffic light timings at the intersection of Victoria Street and Karo Drive.*

In response to your request in reference to the intersection at Victoria Street and Karo Drive, I have responded to each of your questions in turn below-

Distance

The length of the intersection at Victoria Street and Karo Drive based on the distance between the traffic signal pole on the north east corner and the traffic signal pole on the south east corner is approximately 30 metres. The measurement is based on aerial photos.

Signal phasing and timing

The length of time between the orange/amber and red light signal phasing for Victoria Street vehicles travelling southbound is 3 seconds.

The length of time after the red light is activated until the green light is activated and displayed for Karo Drive vehicles travelling westbound on Karo Drive is 2.5 seconds.

Both the orange/amber and red light timing do not vary at any time.

Thank you for your request and please let me know if you need more assistance.

Regards,

Ana Nicholls
Assurance Advisor
